

## PREFACE

The trimestre on “Diophantine equations” at the Hausdorff Research Institute for Mathematics (University of Bonn) took place in January–April 2009. In the next few pages the reader will find a list and photos of the participants of the session, the programs of the workshop on new methods in Hilbert’s 10th problem and of the final conference, and a list of the talks in number theory given in Bonn during the session.

The participants were invited to submit their papers for publication in this volume. The twelve papers, appearing here, have been carefully refereed.

*Acknowledgment.* We wish to record our gratitude to the Hausdorff Research Institute, and in particular to its director, Prof. Dr. M. Kreck, for the hospitality and financial support we received.
